

## Mobile Report™

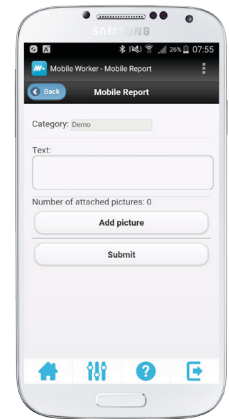

In our personal lives we are capturing and sharing information the moment it happens. In the business world, Apps can be used to report incidents and exchange real time information whilst in the field. If you are looking for a way to communicate better, become more productive and manage incidents in the best possible way, Mobile Report™ may be perfect for you.

### What does Mobile Report™ do?

Mobile Report™ is a simple and intuitive reporting App that allows the right people to be notified when events happen. Users can manage incident reports in less time with fewer mistakes. It allows you to create your own incident categories and notification lists enabling you to capture the right information for onward processing by the right people. A simple self-service management portal enables powerful operational control and auditing resulting in a feature-rich yet cost-effective system.

### Features of Mobile Report™

- Android App for smartphone and tablet; no special equipment is needed.
- Flexibility to create incident categories and assign different e-mail notification details for each.
- Ability to attach multiple photos and free text to each report.
- Ability to see where and when incidents were raised.
- Tracking to understand where your mobile workers are.
- Offline support so if no signal on the mobile device the incident will be sent when a connection is re-established.
- Comprehensive event auditing enabling post incident analysis and review.
- Export facility of both text and images.
- Geofence support where alerts are generated if users enter or exit pre-defined zones, offering greater security.
- UK business day software support as standard with optional 24/7 support.

### Benefits of Mobile Report™

- Automates your incident reporting giving you the opportunity to process reports in seconds with less mistakes.
- Save money by reducing the overheads involved in the process and the time taken to raise and fix incidents.
- Web-based, hosted and self-service resulting in low cost of ownership and operational cost.
- Easily extendable with flexible architecture enabling rapid creation of new services as you want.

### Highly Flexible and Extendable

Mobile Report can be deployed either on its own, or integrated as part of a number of mobile applications on a single device. The days of carrying heavy and expensive equipment that don't work properly, are gone. Organizations using Mobile Report are able to control incidents in a more streamlined and organized manner allowing managers and workers to manage incidents no matter where they are located.

### Why Mobile Worker Plus?

Mobile Worker Plus is a software company specializing in Business to Employee (B2E) solutions focused on field worker safety, productivity and real-time reporting. With a strong background in Mobile and Apps we have been working with a wide variety of customers across multiple market sectors since 2005. Our flexible framework and large portfolio of Apps covers most standard requirements and is agile enough to be tailored to cover any unique business process. We are committed to continually evolving and working with our partners to ensure relevance in what is becoming a more connected and automated world.
