

Mobile Protect™

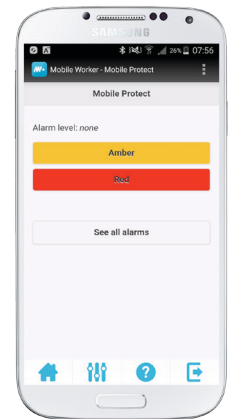

A major concern for many businesses is the safety of their field workforce. This is particularly significant for businesses who need to demonstrate operational compliance as part of their Health and Safety policy. Mobile Protect™ is a simple and highly flexible tool which can meet this need.

What does Mobile Protect™ do?

Mobile Protect™ enables businesses to implement a next generation lone worker protection system. The product comes with flexible deployment options, enabling owners and managers to implement seamlessly with their existing policy, equipment and mobile workers in mind. It can be integrated into the business decision-making processes, making the entire operation streamlined and fit-for-purpose. A simple self-service management portal enables powerful operational control and auditing resulting in a feature-rich yet cost-effective system.

Features of Mobile Protect™

- Android App for smartphone and tablet: no special equipment is needed.
- AMBER and RED alert modes enabling various levels of protection and escalation processes.
- Man-down feature activating a configurable alert mode if a fall is detected.
- Status check feature activating a configurable alert mode if no response is received in a configurable time period.
- SOS button enabling a single button configurable alert if pressed.
- Automatic escalation when an alert is not cancelled or acknowledged, offering greater security.
- Location tracking using technologies such as GPS offering pinpoint accuracy.
- Call recording and playback making sure nothing is missed or lost.
- Listen-in facility with conferencing command and control, ensuring all decision makers are informed and involved.
- Broadcast notifications on alert conditions to multiple recipients over email and SMS, means those who need to be aware are informed.
- Intelligent notifications on alert conditions which make sure that the right people are alerted at the right time.
- Geofence support where alerts are generated if users enter or exit pre-defined zones, offering greater security.
- Two-way messaging for accurate and secure information exchange and real-time communication.
- Comprehensive event auditing enabling post incident analysis and review.
- UK business day software support as standard with optional 24/7 support.
- Optional standards approved Alarm Receiving Centre (ARC) and 24/7 monitoring.

Benefits of Mobile Protect™

- Implement health and safety compliance and vulnerable worker protection.
- Demonstrate corporate responsibility.
- Web-based, hosted and self-service resulting in low cost of ownership and operational cost.
- Easily extendable with flexible architecture enabling rapid creation of new services you want.
- Open interfaces that enable integration with external systems or third party applications making sure your people have all the tools they need.
